

## SATBHSS Project Results Framework

### Component 1

Intermediate Outcomes	Intermediate Outcome Indicators	Purpose of Intermediate Outcome Monitoring
Enhanced treatment success of MDR-TB treatment	IOI#1. Proportion of MDR-TB patients in target geographic areas benefiting from psychosocial and nutritional support during the treatment period.	To track quality of MDR-TB case management
Increased compliance with compensation policies	IOI#2. Proportion of miners eligible for compensation due to occupational diseases actually receiving it	To track the implementation of compensation policies
Improved quality of TB services	IOI#3. Proportion of TB patients satisfied with TB services as per patient exit survey or feedback in target geographic areas	To track client satisfaction, which is a dimension of quality of TB services
Improved quality of TB case management	IOI#1. Proportion of MDR-TB patients in target geographic areas benefiting from psychosocial and nutritional support during the treatment period.	To track quality of TB case management

### Component 2

Intermediate Outcomes	Intermediate Outcome Indicators	Purpose of Intermediate Outcome Monitoring
Improved equipment of laboratory facilities	IOI#5. Proportion of health facilities with TB Smear microscopy	To track coverage of laboratory services
Improved quality of laboratory services	IOI#6. Outbreak for infectious diseases for which cross-border investigation undertaken (number)	To track quality of laboratory services
Improved infrastructure	IOI#7. Health facilities renovated and/or equipped (number)	To track quality of laboratory services
Improved infrastructure	IOI#8 Number of countries scaling up Electronic Health Systems for TB case management or laboratory management (number)	To track implementation of IT health applications in improving TB and laboratory management
Improved quality of laboratory services	IOI#9. Proportion of laboratories rated 2 stars and above in SLIPTA assessment	To track quality of laboratory services
Improved compliance with mine health regulations	IOI#10. Proportion of mines inspected at least twice a year for compliance with national mine health regulations	To track the implementation of mine health regulations

# SATBHSS Project Results Framework

## Component 3

Intermediate Outcomes	Intermediate Outcome Indicators	Purpose of Intermediate Outcome Monitoring
Improved availability of skilled labour	IOI#11. Number of health personnel receiving training (number)	To track coverage of training
Draft legislation in compliance with international best practice	IOI#12. Number of countries in which new legislation or amendment to existing mine health and safety legislation are drafted.	To track the implementation of mine health and safety legislations
Improved reference and contra-reference system among participating countries	IOI#13. Number of miners and ex-miners successfully referred and screened for TB and occupational health services between participating countries and within participating countries.	To track quality of TB case management and occupational lung diseases
Improved quality of care for occupational health	IOI#14. Number of countries with harmonized clinical protocols for occupational health in compliance with international best practices.	To track quality of TB case management and occupational lung diseases
Increased joint operational research	IOI#15. Regional operational research studies commissioned, and findings and lessons learned disseminated through national and regional platforms.	To reflect the contributions from the propose Project to enhance regional knowledge about TB and occupational lung diseases
